EXPERIENCE

Boeing

Software Developer, Flight Simulation Team

June 2025 – Present Berkely, MO

- Developed a new C++ common logging library for the F/A-18 flight simulation team, designed for multi-language support (including .NET, Python, Fortran, and C++ via C-style header APIs) to standardize logging across all flight simulation teams in the future.
- Created a C#/WPF logging monitor tool that ingests logs from applications via TCP sockets, monitors application health through heartbeats, and enables real-time configuration updates for loggers, improving debugging efficiency and operational reliability.
- Modernized and updated 50 repositories to C++20 or .NET 4.8.1 standards within one month of joining, accelerating the team's transition from 70% to 95% completion and enhancing system performance and compatibility.
- Mentored new team members and streamlined on boarding by updating Confluence wiki pages with documentation on startup procedures, internal tools, and Git best practices, reducing integration time for developers.

etrailer.com

Tech Lead - Senior Software Developer

Sept 2022 – June 2025 Wentzville, MO

- Led a team of 3 developers in designing and deploying applications for internal business purposes, delivering high-impact features that enhanced operational efficiency.
- Participated in interviews, provided training, and mentored new operation developers, accelerating their integration and productivity.
- Collaborated with two teams to overhaul the website's shipping calculation process for a multi-warehouse system, integrating internal and external APIs to optimize data processing across 4 warehouses; improved delivery estimates from 3-5 days to 1-2 days for West Coast customers, driving a 10% sales increase in that region, while enhancing nationwide transit estimates for a 15% overall sales uplift.
- Managed the upgrade of projects to .NET 6 and NuGet packages, creating a program that facilitated the transition of 60+ applications and over 500 project code base, ensuring a seamless transition and improved system performance.
- Oversaw warehouse operations logistics as technical lead, developing algorithms and background processes to ensure seamless day-to-day shipping, picking, and purchasing for 50+ staff, enhancing tool reliability, and implementing efficiency improvements that increased sales.

etrailer.com

Software Developer

May 2019 – Sept 2022 Wentzville, MO

- Enhanced internal programs using Aspect-Oriented Programming to improve error tracking, which significantly increased the stability and dependability of applications.
- Created unit tests for new and existing code to ensure the reliability of our applications.
- Managed and maintained the ShipExec software program, performing updates and maintenance, optimizing shipping operations, and ensuring accurate and efficient shipping rates.
- Developed robust API services to facilitate communication between internal and external systems, significantly enhancing system interoperability and streamlining operations.

EDUCATION

B.S., Computer Science and Engineering

Missouri University of Science and Technology

August 2016 – May 2019

Associates Computer Science and Engineering

St. Charles Community College

August 2014 – May 2016

INTERESTS

Technical

- Logistics
- Cloud technologies
- Electric and hydrogen vehicle technologies

Hobbies

- Golf
- Home Improvement
